

HOW TO INSTALL KODI 17.3

on FireStick (for Dummies)

<https://kodifiretvstick.com/install-kodi-17-firestick/>

1

**Go to Settings, then System.
Now go to Developer Options.**

Make sure ADB Debugging is Enabled and Apps From Unknown Sources are both enabled, because Kodi requires both to be on.

2

Return to the Fire TV home screen. Go to Search. Search for "Downloader". Then Install it!

Wait a few seconds for the Kodi Downloader app to install. Then select OPEN to launch it.

3

After you install Downloader, enter <http://bit.ly/kodi173arm> into the Downloader app

Select DOWNLOAD to download Kodi. Wait for the Kodi download to complete. Then the Kodi installer will launch!

4

After the Kodi installer launches, your Fire TV should ask if you'd like to "Install" or "Cancel". Select "Install".

Wait for Kodi to install.

5

After Kodi installs, select "Open App" or "Launch App" to launch Kodi for the first time

Don't quit now! You're almost totally done.

6

Now install a Kodi 17.3 Build!

I recommend No Limits build and Wookie:
